

TIA

Finance operating system

● CLIENT PROPOSAL

Tia ERP Proposal for Finance Operations, Controls, and Reporting

A practical and presentation-ready proposal for implementing a multi-role finance platform that helps organizations manage daily workflows, approvals, branch operations, reporting, and audit visibility from one secure system.

This version focuses on the client-facing dashboards only and shows how each workspace functions in day-to-day use.

Proposal Snapshot

Solution Type: Multi-tenant finance operations platform

Primary Users: Business admins, operations leads, finance teams, operations staff, and auditors

Delivery Model: Phased implementation

Recommended Engagement: Fixed-scope rollout with milestone delivery

Prepared For

Prospective Client

Prepared By

Tia Product Team

Date

June 9, 2026

Purpose

Client presentation and scope alignment

EXECUTIVE SNAPSHOT

What Tia Solves

Current Business Problems

- Finance processes spread across spreadsheets and disconnected tools
- Slow approvals and weak operational visibility
- Limited branch-level control
- Inconsistent user access and poor audit preparedness

Tia's Response

- One system for finance operations and reporting
- Role-based access for each business function
- Business and branch-aware visibility
- Traceable workflows and audit-ready reporting

5

Client-facing dashboards in active operational use

11+

Core functional areas across finance, operations, and oversight

Multi-branch

Scope-aware access for head office and branch activity

Supabase

Secure backend foundation for authentication and data

CORE SCOPE

Operations

Customers, invoices, expenses, payroll support, asset records, approvals, and branch operations.

Finance

General ledger posting, chart of accounts, trial balance, financial reports, and export-ready outputs.

Governance

User administration, branch structure, payroll oversight, role controls, and audit visibility.

HOW IT WORKS

How Each Dashboard Works

Business Admin Dashboard

CONTROL

Manage branch structure, payroll oversight, user access, and overall business controls.

Users

Create users and assign dashboard access.

->

Branches

Set branch structure and scope visibility.

->

Payroll

Review payroll setup and business-wide controls.

Head of Operations Dashboard

REVIEW

Review branch activity, approve operational work, and monitor finance movement.

Queue

See pending branch transactions and requests.

->

Approve

Review invoices, expenses, and GL postings.

->

Report

Track due values, spend watch, and branch performance.

Finance Dashboard

ACCOUNTING

Review payroll-linked accounting, inspect ledgers, and produce trial balance and reports.

Payroll

Review payroll data and finance postings.

->

Ledgers

Open ledgers and chart of accounts.

->

Reports

Generate trial balance and accounting reports.

Operations Dashboard

POST

Capture expenses, post ledger activity, and work within the active branch workflow.

Capture

Enter expenses and transaction details.

->

Post

Submit GL postings and operational records.

->

Track

Monitor pending approvals and monthly posting volume.

Auditor Dashboard

READ ONLY

Independently review reports, trial balance, ledgers, and audit trail visibility.

Review

Open trial balance and chart of accounts views.

->

Trace

Inspect ledgers, payroll mapping, and activity history.

->

Validate

Use reports to confirm balances and evidence.

Workflow View

This slide shows how each user group moves from action to review to reporting inside its own dashboard.

- Admin focuses on structure and control
- Operations focuses on transaction capture and posting
- Finance focuses on ledgers, payroll mapping, and reports
- Audit focuses on read-only validation

ROLE FEATURES

Features Available to Each Role

Business Admin

- Manage users and access rights
- Manage branches and business structure
- Oversee payroll setup
- Monitor business-wide finance controls

Head of Operations

- Review pending branch activity
- Approve invoices and expenses
- Monitor due values and spend watch
- View branch-level operational reports

Finance

- Access payroll-linked finance workflows
- Open general ledgers and chart of accounts
- Generate trial balance
- Run financial reports and validations

Operations

- Capture expenses and branch transactions
- Post GL activity
- Track posting volume and pending approvals
- Work within active branch scope

Auditor

- Read-only access to trial balance and reports
- Inspect ledgers and audit trail
- Validate balances and control evidence
- Review without editing live data

Access Principle

Each role sees only the functions required for its operational responsibility, reducing clutter and protecting sensitive records.

Client Value

This role-based model improves control, speeds adoption, and makes responsibilities easier to understand across teams.

IMPLEMENTATION SCOPE

Proposed Delivery Modules

Module	Included Scope	Outcome
Business Administration	User setup, branch controls, payroll oversight, and business-wide access management	Structured control for daily administration
User and Access Management	Role-based login, workspace routing, role permissions, and branch-aware access	Safer and clearer access control
Customer and Invoice Workflows	Customer records, invoices, invoice items, and payment-related visibility	Revenue operations in one system
Expense and Approval Workflows	Expense capture, status control, and approval-aware operations	Better spend governance
Finance and Reporting	GL posting, chart of accounts, ledger statements, transaction summaries, trial balance, and exports	Stronger reporting confidence
Audit and Oversight	Audit logs, read-only review access, and branch-aware reporting visibility	Improved review and compliance readiness

Architecture

- Modular frontend pages and workspaces
- Shared UI and feature modules
- Supabase authentication and database
- Multi-tenant data structure

Security Model

- Business-level data separation
- Role-sensitive navigation and rendering
- Row-level security-ready structure
- Audit-oriented workflow design

COMMERCIAL TERMS

Recommended Commercial Structure

Item	Recommended Term
Engagement Model	Fixed-scope implementation with milestone-based delivery
Commercial Basis	One-time implementation fee plus optional post-launch support plan
Payment Structure	40% at project commencement, 35% after core module delivery, 25% at final deployment and sign-off
Change Requests	Any functionality outside approved scope to be costed and approved separately
Support Window	30-day post-launch stabilization support recommended
Hosting and Third-Party Services	To be billed separately or managed under a client-approved recurring service plan

Included

- Solution setup and platform configuration
- Core workflow implementation within approved scope
- Role setup and access control structure
- Basic handover for administrators

Not Included by Default

- Custom third-party integrations not yet scoped
- Large data migration from external systems
- Advanced custom reports outside the approved package
- Ongoing managed support unless separately contracted

Commercial Note

Final pricing should be attached as a client-specific annex once scope and delivery boundaries are approved.

IMPLEMENTATION TIMELINE

Recommended Delivery Timeline

Week	Phase	Activities	Output
Week 1	Discovery and Confirmation	Confirm requirements, final role matrix, branch structure, reporting expectations, and rollout priorities	Approved scope and delivery plan
Week 2-3	Platform Foundation	Finalize organization setup, access rules, role routing, and live environment configuration	Stable platform core
Week 4-5	Workflow Delivery	Complete invoice, expense, user, branch, and operational workflows within approved scope	Usable day-to-day operations layer
Week 6-7	Finance and Reporting	Refine GL workflows, trial balance, exports, and management reporting views	Client-ready reporting layer
Week 8	UAT and Handover	Client review, fixes, admin handover, and launch readiness checks	Go-live approval

Post-Go-Live Stabilization

Recommended 30-day support period for issue resolution, user support, and minor post-launch refinements.

Phase 2 Expansion

Optional second phase for billing automation, deeper approvals, custom reports, integrations, or sector-specific extensions.

Operational Control

Centralized workflows reduce fragmented processing and create clearer ownership.

Visibility

Management and finance teams gain clearer reporting across users and branches.

Audit Readiness

Traceability and structured access improve review confidence and compliance support.
